

LETTER OF RECOMMENDATION

In my capacity as a professor with students, I wish to put on record my impression of Bondalapati Bindu Priya, whom I have known for two years. Bindu Priya has been my student in the CSE department, and I have taught her the subjects 'Data Analytics' and 'Data Structures.' Our two-year association gave me ample opportunity to assess her caliber and potential as a prospective candidate for the Master's program in CSE at your esteemed university. She is a very sincere and studious student with sufficient inclination to excel in her chosen field of studies.

Bindu Priya is among those students who channelize their efforts towards their goals and possess many requisite characteristics for a thorough professional. However, I was personally impressed by her creative instincts. She was a performer driven by her desire to be creative. She has a particular method of approaching a problem, which even her peers followed later due to success. Her first approach to any problem is to list the possible parameters that can be manipulated and the effects of such parameters. Garnering such an approach with an optimum outlook has been her noteworthy initiative.

As an active member of the IEEE students' chapter, her organizing capacity both individually and in a group was well pronounced. She has the tremendous capability to complete tasks with ardent flexibility and prescience and within the given timeline, which is an admirable quality. Bindu's panache to excel in her domain and every other domain speaks about her astuteness at this young age. To be precise, her self-confidence and sagacity are her armor with which she encounters tough challenges, and this is something I find impressive.

Bindu Priya is very proficient with spoken and written English and has no difficulty making her understand and communicate effectively. In my interaction with her, I gauged her excellent communication skills that brought out her relevant points substantially.

The potential for effective leadership and teamwork, commitment to her goals, perseverance, and a desire to learn are the commendable qualities that Bindu Priya will bring to your university. I therefore strongly recommend admission to her in your university with the adequate financial assistance you can offer. I am confident that she will continue to be a promising, competitive, and enthusiastic student and be capable of efficiently discharging her duties as a graduate assistant. I wish her all the success in her future endeavors.

DR.K.Srinivas M.Tech.,Ph.D.
Professor,
Department of Computer Science and Engineering,
VR Siddhartha Engineering College.
